

PUBLICATIONS

1. A note on uniform distributions (number Theory), *Bulletin of the Institute of Mathematics, Academia Sinica*, 1 (1973), 229–238.
2. Energy decay estimates and control theory for the wave equation in a bounded domain, *Proc. of the 15th Annual Allerton Conference on Communication, Control and Computing*, Urbana, Illinois, (1977), 496–502.
3. Control and stabilization for the wave equation in a bounded domain, *SIAM J. Control Opt.*, 19 (1979), 66–81.
4. Energy decay estimates and exact boundary value controllability for the wave equation in a bounded domain, *J. Math. Pure Appl.*, 58 (1979), 249–273.
5. Well-posedness and approximations of linear Volterra integrodifferential equations in Banach spaces, in “Volterra Equations”, *Helsinki Symposium on Integral Equations*, Springer Lecture Notes, #737 (1979), 83–87 (with R. Grimmer).
6. Control Theory for the wave equation in compact Riemannian manifolds, *Funkcialaj Ekvacioj*, 23 (1980), 39–61 (with R.S. Millman).
7. Penalization and regularization of quadratic cost controllability problems in a finite dimensional space, *Institut National de Recherche d’Informatique et d’Automatique Research Report #10*, Rocquencourt, France, March 1980 (with W.H. Mills).
8. Semigroups and integral equations, *J. of Integral Equations*, 2 (1980), 133–154 (with R. Grimmer).
9. Control and stabilization for the wave equation in a bounded domain, part II, *SIAM J. Control Opt.*, 19 (1981), 114–122.
10. Control and stabilization for the wave equation, part III, domain with moving boundary, *SIAM J. Control Opt.*, 19 (1981), 123–138 (with C. Bardos).
11. A note on the boundary stabilization of the wave equation, *SIAM J. Control Opt.*, 19 (1981), 106–113.
12. Exact controllability theorems and numerical simulations for some nonlinear differential equations, *SIAM J. Control Opt.*, 19 (1981), 744–764 (with W.H. Mills, G. Crosta).
13. Finite elements and terminal penalization for quadratic cost optimal control problems governed by ordinary differential equations, *SIAM J. Control Opt.*, 19 (1981), 765–790 (with W.H. Mills).
14. A mathematical model for linear elastic systems with structural damping, *Math. Res. Center Technical Summary Report #2089*, Univ. of Wisconsin- Madison, June 1980, *Quart. Appl. Math.*, 39 (1981-82), 433-454 (with D.L. Russell).

15. Asymptotic expansion of a penalty method for computing a regulator problem governed by Volterra equations, in "Proceedings of Volterra and Functional Differential Equations", 217–231, Marcel-Dekker, New York, 1982 (with R. Grimmer).
16. Integral equations as evolution equations, Control Theory Centre, Res. Report #92, University of Warwick, Coventry, England, Jan. 1981, J. Diff. Equations, 45 (1982), 53–74 (with R. Grimmer).
17. Sharp error estimates for a finite element-penalty approach to a class of regulator problems (with W.H. Mills, S. Sun, D.A. Yost), Math. Comp., 40 (1983), 151–173.
18. Finite difference numerical methods for boundary control systems governed by hyperbolic partial differential equations, in Proceeding of NASA/JPL Workshop on the Applications of Distributed System Theory to the Control of Large Space Structures, pp. 477–495. G. Rodriguez ed., JPL Publ. #83-46, Pasadena, Calif., July 1983 (with Q. Zheng, M. Coleman and S. Weerakoon).
19. Well-posedness, control and computation for a one-phase Stefan problem with Neumann condition (with S. Sun, Q. Zheng), Proc. Roy. Soc. Edinburgh, 98A (1984), 105–148.
20. Optimal boundary impedance for the minimization of reflection (I): asymptotic solutions by the geometrical optics method, Optimal Control Applications & Methods, 6 (1985), 141–149.
21. N -person differential games, part I, a new minimax formulation and complete open loop solutions, Proc. Roy. Soc. Edinburgh, A 103 (1986), 15–34 (with Q. Zheng, J.X. Zhou).
22. Modeling, stabilization and control of serially connected beams, (with M.C. Delfour, A.M. Krall and G. Payre), SIAM J. Control Opt., 25 (1987), 526–546.
23. An initial value problem for the Burgers equation. The 2nd International Conference on Control Theory for Distributed Parameter Systems and Applications, Vorau, Austria, July 1984, Springer Lecture Notes in Control and Information Sciences, Vol. 75 (1985), 52–76 (with S. Weerakoon, H.K. Wang).
24. Uniform exponential stabilization of coupled Euler-Bernoulli beams, The 23rd IEEE-CDC Proceedings, 1159–1162, Las Vegas, Nevada, Dec. 1984 (with M.C. Delfour, A.M. Krall).
25. Minimizing the reflection of electromagnetic waves by surface impedance, Math. Res. Center Technical Summary Report #2942, Univ. of Wisconsin, Madison, July 1986. Wave Motion, 9 (1987), 19–36 (with T.J. Bridges, G. Crosta).
26. The boundary element numerical method for two dimensional linear quadratic elliptic problems: (I) Neumann control, Math. Comp., 49 (1987), 479–498 (with Y.L. Tsai).

27. Pointwise stabilization in the middle of the span for second order systems, nonuniform and uniform decay results, *SIAM J. Appl. Math.*, 47 (1987), 751–780 (with M. Coleman, H.H. West).
28. Diagonal convexity conditions for problems in convex analysis and quasi-variational inequalities, *J. Math. Anal. Appl.*, 132 (1988), 213–225 (with J. Zhou).
29. A boundary element method based on Cauchy integrals for some linear quadratic boundary control problems on a circle, *Optimal Control Applications & Methods*, 9 (1988), 93–100 (with C.P. Chen, I. Aronov).
30. The Euler-Bernoulli beam equation with boundary energy dissipation, “Operator Methods for Optimal Control Problems,” S.J. Lee ed., *Lecture Notes in Pure and Applied Mathematics Series*, pp. 67–96 Marcel Dekker Inc., New York (with S.G. Krantz, D.W. Ma, C.E. Wayne, H.H. West).
31. Pointwise stabilization for coupled quasilinear and linear wave equations, presented at the Conference on Control and Identification of Distributed Systems, Vorau, Austria, *Springer Lecture Notes on Control and Information Sciences*, #102 (1987), 40–63 (with H.K. Wang).
32. Asymptotic behavior of solutions of the one-dimensional wave equations with a nonlinear elastic dissipative boundary condition, *SIAM J. Control Opt.*, 27 (1989), 758–775 (with H.K. Wang).
33. Minimizing the reflection of waves by surface impedance using boundary elements and global optimization, *Wave Motion*, 10 (1988), 239–255 (with T.J. Bridges, J. Zhou).
34. Analysis, designs and behavior of dissipative joints for coupled beams, *SIAM J. Appl. Math.*, 49 (1989), 1665–1693 (with S.G. Krantz, D.L. Russell, C.E. Wayne, H.H. West, M.P. Coleman).
35. Computing optimal boundary controls of a plate by the boundary element method, *Proceedings of the 26th IEEE Control and Decision Conference*, 992–996, Los Angeles, December 1987 (with J. Zhou).
36. Modelling, analysis and testing of dissipative beam joints - experiments and data smoothing, presented at the 6th International Conference on Mathematical Modelling, Washington Univ., St. Louis, MO, August 1987. *Mathl. Comput. Modelling*, 11 (1988), 1011–1016, Pergamon Press, New York, 1988 (with S.G. Krantz, D.L. Russell, C.E. Wayne, H.H. West, J. Zhou).
37. Shock structure in jets of arbitrary exit geometry, AIAA paper 87-2697, AIAA 11th Aeroacoustics Conference, Oct. 19–21, 1987, Palo Alto, California. Full length paper *J. Sound & Vibration*, 132 (1989), 199–211 (with P.J. Morris and T.R.S. Bhat).
38. Exponential stability analysis of a long chain of coupled vibrating strings with dissipative linkage, *SIAM J. Appl. Math.*, 49 (1989), 1694–1707 (with K.S. Liu, F.L. Huang).

39. Theory, designs and applications of point stabilizers for dynamic structures, presented at the COM-CON Workshop on the Stabilization of Large Flexible Space Structures, Montpellier, France, December 1987. Workshop Proceedings, pp. 117–143, Optimization Software, Inc., New York, 1989.
40. An asymptotic average decay rate for the wave equation with variable coefficient viscous damping, *SIAM J. Appl. Math.*, 50 (1990), 1341–1347 (with S.A. Fulling, F.J. Narcowich, C. Qi).
41. Exponential decay of energy of evolution equations with locally distributed damping, *SIAM J. Appl. Math.*, 51 (1991), 266–301 (with S.A. Fulling, F.J. Narcowich, S. Sun).
42. The wave propagation method for the analysis of boundary stabilization in vibrating structures, *SIAM J. Appl. Math.*, 50 (1990), 1254–1283 (with J. Zhou).
43. Asymptotic locations of eigenfrequencies of vibration of an Euler-Bernoulli beam with nonhomogeneous structural and viscous damping coefficients, *SIAM J. Control Opt.*, 29 (1991), 347–367 (with H.K. Wang).
44. The boundary element method for shape control of distributed parameter elastic systems, “Mechanics and Control of Space Structures”, AIAA Progress in Aeronautics and Astronautics Series, 315–348, J.L. Junkins ed., AIAA, Washington, D.C., 1990 (with J. Zhou).
45. Analysis of vibrating eigenfrequencies of a thin plate by Keller-Rubinow’s wave method (I), *SIAM J. Appl. Math.*, 51 (1991), 967–983 (with M. P. Coleman, J. Zhou).
46. Differentiability of the semigroup associated with a structural damping model, Proc. 28th IEEE-CDC, 2034–2038, Tampa, Florida, Dec.1989 (with F.L. Huang, K. Liu).
47. More boundary dissipation does not necessarily imply larger asymptotic decay rates, *Asymptotic Analysis*, 6 (1992), 191–203 (with F.L. Huang, C.Y. Lin).
48. Augmenting a Fredholm operator of zero index to achieve invertibility for elliptic boundary value problems, *J. Math. Anal. Appl.*, 176 (1993), 24–48 (with S. Sun).
49. Some boundary control problems and computations for the linear elastostatic Kirchhoff plate on an exterior domain, in “Boundary control and variations”, Proc. of IFIP Workshop, J.P. Zolesio ed., Springer-Verlag Lecture Notes on Control and Information Science #178, pp. 82–117, Springer-Verlag, New York, 1992.
50. The wave method for determining the asymptotic damping rates of eigenmodes I: The wave equation on a rectangular or circular domain, *SIAM J. Control Opt.*, 29 (1991), 656–677 (with J. Zhou).
51. Boundary Element Methods for Elliptic Boundary Value Problems, Lecture Notes published by the Institute of Applied Mathematics, National Tsing Hua University, Hsinchu, Taiwan, June 1991 (169 pages).

52. On the equivalence of the wave propagation method and Bolotin's method for the eigenfrequencies of a vibrating thin plate, *Wave Motion*, 16 (1992), 285–297 (with M.P. Coleman and J. Zhou).
53. Visualization of special eigenmode shapes of a vibrating elliptical membrane, *SIAM Review*, 36 (1994), 453–469 (with P.J. Morris and J. Zhou).
54. Instability waves in supersonic jets confined in circular and noncircular ducts, *J. Sound & Vibration*, 171(2) (1994), 231–253 (with K. Viswanathan and P. J. Morris).
55. Point observation in linear-quadratic elliptic distributed control systems, in *Proceedings of American Mathematical Society Summer Conference on Control and Identification of Partial Differential Equations*, H.T. Banks, R. Fabiano and K. Ito ed., Chap. 11, pp. 155-170, SIAM, Philadelphia, 1993 (with L. Ji).
56. Boundary element method for shape (domain) optimization of linear-quadratic elliptic boundary control problems, in *Proceedings of IFIP*, June 1992, Sophia-Antipolis, France, Springer-Verlag Lecture Notes on Control and Information Sciences, J.P. Zolesio ed. Lecture Notes in Pure and Appl. Math., #163 (1994), 27–72 (with J. Zhou and R. McLean).
57. N -person differential games, Part II, *J. Computational Mathematics*, 6 (1992), 303–320 (with Q. Zheng).
58. N -person differential games, Part III, *J. Computational Mathematics*, 6 (1992), 321–338 (with Q. Zheng, W.H. Mills and W.H. Shaw).
59. Regularities and pseudodifferential symbols of boundary layer operators for elastostatic thin Kirchhoff biharmonic plates, in “*Proc. of the Workshop on Differential Equations (III)*”, Institute of Math., Academia Sinica, Taipei, Taiwan, (1995), 21–47.
60. Boundary element monotone iteration scheme for semilinear elliptic partial differential equations. *Math. Comp.*, 65 (1996), 943–982 (with Y. Deng, W.M. Ni and J. Zhou).
61. Linear superposition of chaotic and orderly vibrations on two serially connected strings with a van der Pol joint, *Int. J. Bifurcation & Chaos* 6 (1996), 1509–1527 (with S.B. Hsu and J. Zhou).
62. Improving low order eigenfrequency estimates derived from the wave propagation method for an Euler-Bernoulli beam, *J. Sound & Vibration* 204 (1997), 696–704 (with M.P. Coleman).
63. Chaotic vibrations of the one-dimensional wave equation subject to a self-excitation boundary condition, Part I, *Transactions Amer. Math. Soc.* 350 (1998), 4265–4311 (with S.B. Hsu and J. Zhou).
64. Some corner effects on the loss of selfadjointness and nonexcitation of vibration in thin plates and shells, *Quart. J. Mech. Appl. Math.* 51 (1998), 213–239 (with M.P. Coleman and Z. Ding).

65. Boundary stabilization of Donnell's shallow circular cylindrical shell, *J. Sound & Vibration* 209 (1998), 265–298 (with M.P. Coleman and K.S. Liu).
66. The fundamental solution of the shallow circular cylindrical shell, Part I, derivations, *Int. J. Engineering Sci.* 38 (2000), 1235–1257 (with M.P. Coleman, D. Ma, P.J. Morris and P. You).
67. The fundamental solution of the shallow circular cylindrical shell, Part II, numerical algorithms and software, *Int. J. Engineering Sci.* 38 (2000), 1259–1274 (with M.P. Coleman and P. You).
68. Boundary element monotone iteration scheme for semilinear elliptic equations, Part II, coupled 2×2 systems and visualization, *Math. Comp.* 69 (1999), 629–652 (with Y. Deng, W.M. Ni and J. Zhou).
69. Asymptotic equipartition of energy by nodal points of an eigenfunction, *J. Math. Phys.* 38 (1997), 5350–5360 (with S.A. Fulling and J. Zhou).
70. Some phenomena in mechanical vibrations and the associated mathematical properties (in Chinese), *Mathmedia*, 20(2) (1996), Academia Sinica, Taipei, Taiwan, 3–25.
71. Chaotic vibrations of the one-dimensional wave equation due to a self-excitation boundary condition, Part II, energy injection, period doubling and homoclinic orbits, *Int. J. Bifurcation & Chaos* 8 (1998), 423–445 (with S.B. Hsu and J. Zhou).
72. *Ibid*, Part III, natural hysteresis memory effects, *Int. J. Bifurcation & Chaos* 8 (1998), 447–470 (with S.B. Hsu and J. Zhou).
73. A high-linking algorithm for sign-changing solutions of semilinear elliptic equations, *Nonlinear Analysis, Theory, Methods & Applications* 38 (1999), 151–172 (with Z. Ding and D. Costa).
74. Algorithms and visualization for solutions of nonlinear elliptic equations, *Int. J. Bifurcation & Chaos* 7 (2000), 1565–1612 (with W.M. Ni and J. Zhou).
75. Snapback repellers as a cause of chaotic vibration of the wave equation due to a van der Pol boundary condition and energy injection in the middle of the span, *J. Math. Phys.* 39 (1998), 6459–6489 (with S.B. Hsu and J. Zhou).
76. Nonisotropic spatiotemporal chaotic vibration of the wave equation due to mixing energy transport and a van der Pol boundary condition, *Int. J. Bifurcation & Chaos* 12 (2002), 535–559 (with S.B. Hsu and J. Zhou).
77. Chaotic vibration of the wave equation by nonlinear feedback boundary control, Chapter 7 in “Control of Bifurcation and Chaos in Engineering”, CRC Press, Boca Raton, FL, 1999, 131–154 (with S.B. Hsu and J. Zhou).
78. Boundary element monotone iteration scheme for semilinear elliptic boundary value problems, Part III, Regular oblique derivative nonlinear boundary conditions, submitted (with Y. Deng, W.M. Ni and J. Zhou).

79. Grover's algorithm for multiobject search in quantum computation, <http://xxx.lanl/quant-ph/9909040> in "Directions in Quantum Optics", H.J. Carmichael, R.J. Glauber and M.O. Scully (eds.), Springer-Verlag, 2000, 165–176.
80. Generalization of Grover's algorithm to multiobject search in quantum computing, Part I, continuous time and discrete time, in Chap. 6 of "Mathematics of Quantum Computation", R.K. Brylinski and G. Chen (eds.), CRC Press, Boca Raton, Florida, 2002, 135–160 (with S.A. Fulling and J. Chen).
81. Generalization of Grover's algorithm to multiobject search in quantum computing, Part II, general unitary transformations, in Chap. 7 of "Mathematics of Quantum Computation", R.K. Brylinski and G. Chen (eds.), CRC Press, Boca Raton, Florida, 2002, 161–168 (with S. Sun).
82. Nonlinear boundary feedback control of the one-dimensional wave equation, Proc. of the 39th IEEE Conference on Decision and Control, Dec. 2000, Sydney, Australia, 2060–2065 (with T. Huang and S.B. Hsu).
83. Unbounded growth of total variations of snapshots of the 1D linear wave equation due to the chaotic behavior of iterates of composite nonlinear boundary reflection relations, in *Advances in Control of Nonlinear Distributed Parameter Systems*, G. Chen, I. Lasiecka and J. Zhou (eds.), Marcel Dekker, New York, 2001, 15–42 (with T. Huang, J. Juang, and D. Ma).
84. Algorithms and visualization for solutions of nonlinear elliptic equations, Part II: Dirichlet, Neumann and Robin boundary conditions and problems in 3D, *Int. J. Bifurcation and Chaos*, 11 (2001), 1781–1799 (with W.M. Ni, A. Perronnet, and J. Zhou).
85. Quantum multi-object search algorithm with the availability of partial information, *Z. Naturforsch.* 56a (2001), 879–888 (with Z. Diao)
86. The universality of the quantum Fourier transform in forming the basis of quantum computing algorithms, *J. Math. Anal. Appl.* 274/1 (2002), 69–80 (with C.M. Bowden, Z. Diao, and A. Klappenecker).
87. Quantum circuit design for Grover's algorithm, *Zeitschrift für Naturforschung* 57a (2002), 701–708 (with Z. Diao and M.S. Zubairy).
88. Generalization of Grover's algorithm to multiobject search in quantum computing, Part I, continuous time and discrete time, Chapter 6 in "Mathematics of Quantum Computation", R. Brylinski and G. Chen, eds., CRC Press, Boca Raton, FL, 2002, 135–160 (with S.A. Fulling and J. Chen).
89. Analyzing the displacement terms memory effect to prove the chaotic vibration of the wave equation, *Int. J. Bifurcation and Chaos* 12 (2002), 965–981 (with S.B. Hsu and T.W. Huang).

90. Nonisotropic spatiotemporal chaotic vibration of the wave equation due to mixing energy transport and a van der Pol boundary condition, *Int. J. Bifurcation and Chaos* 12 (2002), 535–559 (with S.B. Hsu and J. Zhou) .
91. Generalization of Grover’s algorithm to multiobject search in quantum computing, Part II, general unitary transformations, Chapter 7 in “*Mathematics of Quantum Computation*”, R. Brylinski and G. Chen, eds., CRC Press, Boca Raton, FL, 2002, 161–168 (with S. Sun).
92. Mathematical models of contemporary elementary quantum computing devices, invited book chapter, in “*Quantum Control: Mathematical and Numerical Challenges*”, Centre de Recherches Mathematiques Lecture Notes #33, A. Bandrauk and M.C. Delfour eds., Amer. Math. Soc., Providence, R.I., 2003, 79–118 (with D.A. Church, B.-G. Englert and M.S. Zubairy).
93. Chaotic vibration of the wave equation with nonlinear feedback boundary control: progress and open questions, invited book chapter, in “*Chaos Control*”, Chapter 2, G.R. Chen, X. Yu and D.J. Hill eds., Springer Lecture Notes on Control and Information Sciences, Vol. 292, Springer, Heidelberg, 2003, pp. 25–50 (with S.B. Hsu and J. Zhou).
94. Boundary element monotone iteration scheme for semilinear elliptic equations, regular oblique derivative nonlinear boundary conditions, invited chapter, in “*Variational Methods for Nonlinear Elliptic Partial Differential Equations: Open Problems, Recent Progress and Numerical Algorithms*”, J.M. Neuberger, ed., Amer. Math. Soc. Contemporary Math. 357 (2004), Providence, R.I., 17–48 (with Y. Deng, W.M. Ni and J. Zhou).
95. A note on the elliptic Sine-Gordon equation, invited chapter, in “*Variational Methods for Nonlinear Elliptic Partial Differential Equations: Open Problems, Recent Progress and Numerical Algorithms*”, J.M. Neuberger, ed., Amer. Math. Soc. Contemporary Math. 357 (2004), Providence, R.I., 49–67 (with Z. Ding, C.-R. Hu, W.-M. Ni and J. Zhou).
96. Convergence analysis of an optimal scaling algorithm for semilinear elliptic boundary value problems, invited chapter, in “*Variational Methods for Nonlinear Elliptic Partial Differential Equations: Open Problems, Recent Progress and Numerical Algorithms*”, J.M. Neuberger, ed., Amer. Math. Soc. Contemporary Math. 357 (2004), Providence, R.I., 69–83 (with B.-G. Englert and J. Zhou).
97. Chaotic behavior of interval maps and total variations of iterates, *Int. J. Bifurcation & Chaos* 14 (2004), 2161–2186 (with T. Huang and Y. Huang).
98. Visualization of solutions of singularly perturbed semilinear boundary value problems, invited book chapter, in “*Handbook of Differential Equations*”, M. Chipot and P. Quittner, eds., Elsevier, Amsterdam, The Netherlands, 2004, pp. 218–228 (with W.-M. Ni, A. Perronnet and J. Zhou).

99. Molecular calculations with simple two-center correlated orbitals, *Chem. Physics Letters* **389** (2004), 385–392 (with M.O. Scully, R. Allen, K.T. Kapale, M. Kim, and A. Svidzinsky).
100. On positive solutions of the semilinear elliptic sine-Gordon equation, *Comm. Pure and Appl. Anal.* **4** (2005), 285–296 (with Z. Ding and S. Li).
101. The two electron molecular bonds revisited: from Bohr orbits to two-center orbitals, 99 pages, *Adv. Atomic, Molecular and Optical Physics* **51** (2005), 93–238, Elsevier, London (with S.A. Chin, Y. Dou, K.T. Kapale, M. Kim, A.A. Svidzinsky, K. Urtekin, H. Xiong and M.O. Scully).
102. Traveling wave behavior for a nonlinear reaction-diffusion equation of the generalized Fisher type, *Discrete, Continuous and Impulsive Dynamical Systems* **12** (2005), 643–664 (with Z. Feng).
103. Solitary wave solutions of the compound Burgers-Korteweg-de Vries equation, accepted, *Physica A* **352** (2005), 419–435 (with Z. Feng).
104. Rapid fluctuations of chaotic maps on \mathbb{R}^N , *J. Math. Anal. Appl.* **323** (2006), 228–252 (with Y. Huang and D. Ma).
105. Quantum dot computing gates, *Int. J. Quantum Information* **4** (2006), 233–296 (with Z. Diao, J. Kim, A. Neogi, K. Urtekin and Z. Zhang).
106. Mathematical analysis of the Bohr atom model, *J. Math. Physics.* **47** (2006), 022107 (23 pages) (with Z. Ding, S.B. Hsu, M. Kim and J. Zhou).
107. Some fundamental mathematical properties in atomic and molecular quantum mechanics, invited paper, to appear in “High Dimensional PDEs in Science and Engineering”, A. Bandrauk, M.C. Delfour and C. Le Bris (eds.), Centre de Recherches Mathématiques (CRM), Université de Montréal, Lecture Notes, Amer. Math. Soc., Providence, R.I. (with Z. Ding, A. Perronnet, M.O. Scully, R. Xie and Z. Zhang).
108. A realization scheme for quantum multi-object search, accepted, to appear in “Mathematics of Quantum Computation and Quantum Technology”, G. Chen, L. Kauffman and S. Lomonaco (eds.), Chapman & Hall/CRC Press, Boca Raton, Florida. (with Z. Diao, and P.J.S. Shiue).
109. Qualitative study of the damped Duffing equation and its applications, accepted, to appear in *Discrete and Continuous Dynamical Systems (B)* (with Z. Feng and S.B. Hsu).
110. Superconducting quantum computing devices, accepted, to appear in “Mathematics of Quantum Computation and Quantum Technology”, G. Chen, L. Kauffman and S. Lomonaco, (eds.), Chapman & Hall/CRC Press, Boca Raton, Florida (with Z. Zhang).

111. NMR quantum computing, to appear in *Advances in Mechanics and Mathematics Annual*, D.Y. Gao and R.W. Ogden eds., Springer, New York-Heidelberg (with Z. Zhang, Z. Diao and P.R. Hemmer).
112. Visualization and dimensional scaling for some three-body problems in atomic and molecular quantum mechanics, preprint (with Z. Ding, A. Perronnet, R. Xie and Z. Zhang).
113. Mathematical analysis of the max-min problem from the dimensional scaling method in chemical physics, preprint with Z. Ding).
114. The spectrum of chaotic time series (I): Fourier analysis, submitted (with S.B. Hsu, Y. Huang and M. Roque-Sol).
115. The spectrum of chaotic time series (II): wavelet analysis, submitted (with S.B. Hsu, Y. Huang and M. Roque-Sol).
