

Math 618-600, Spring 2008

Professor Emil J. Straube

MWF 11:30 - 12:20, ZACH104A

Office: Miln 215, 845 3721, straube@math.tamu.edu

Office hours: MWF 2:00 - 3:00, but feel free to come and see me any time.

Text: Robert E. Greene and Steven G. Krantz,
Function Theory of One Complex Variable,
American Math. Society 2006 (3rd edition)

Prerequisites: This is the second semester of the *Complex Analysis* qualifier sequence. Accordingly, Math 617 or equivalent is required.

Course Content: We will cover much (but not all!) of chapters 6 through 12 in the text. A brief list of topics is as follows: Riemann mapping theorem, harmonic functions, Weierstrass factorization, theorems of Weierstrass and Mittag-Leffler, Jensen's formula, entire functions of finite order, analytic continuation along a curve, monodromy, the elliptic modular function, Picard's theorem, topological issues, Runge's theorem, Mergelyan's theorem

Grading Policy: There will be three exams worth 100 points. All exams will be takehome.
