Step 1: Set the target cell to the cell that gives the value of the objective function and set style of the objective function.

Step 2: Set the "By Changing Cells". This is the cells that where the solution is located.

Step 3: Now set up the constraints. Click on the Add button.
Edit the add constraint window to show the first constraint and press OK.

Now enter the rest of the constraints.

Make sure your window has these settings.
**Step 4:** Click on options to get the solver option window shown below. Check to make sure that your options match the ones displayed to the right.

**Step 5:** After clicking solve in the Solver Parameters window, you can pick what results are shown by Excel. Click on Answer and Sensitivity to get those results.
