Title: Simplicity and uniqueness of trace of some reduced free products of finite-dimensional C^* -algebras.

Time and Place: Monday, April 10, 3:00-3:55pm, Milner 317.

Abstract: In this talk we study the question of simplicity and uniqueness of trace of the reduced free product $(\mathbb{C} \oplus_{\alpha} \mathbb{C}) * (M_n, tr_n)$ depending on α . We use results of [Anderson-Blackadar-Haagerup91], [Dykema93], [Dykema99] on similar topics.
