

Final Exam Review

MATH 142-Drost

1. Find the domain of the function $f(x) = \frac{\sqrt{20 - 4x}}{\log(x + 10)}$.

2. Find the vertex of $f(x) = 4x^2 - 24x + 11$

3. $\lim_{x \rightarrow 2} \frac{x^2 + 3x - 10}{x^2 - x - 2}$

4. $\lim_{x \rightarrow \infty} \frac{4x^2 - x + 5}{1 - x - 2x^2}$

5. Describe the end line behavior of $f(x) = ax^3 - bx^2 + c$, if $a, b, c < 0$.

6. Given $\log_{\star} 2 = a$, $\log_{\star} 3 = b$, and $\log_{\star} 5 = c$. Evaluate: $\log_{\star} 600$.
7. Solve: $\log_2\{\log_3[\log(x^2 + 90x)]\} = 0$
8. Find the derivative of $y = -4e^{2x} + 6x^2 - 15x + 7 + \ln(x^2 + 1)$.
9. Find $h'(3)$ when $h(x) = f(x) \cdot g(x)$ and $f(5) = a - b$, $g(5) = 3a + b$, $f'(5) = 2a + 4b$, and $g'(5) = 2b$.
10. Find any critical values for $f(x) = \frac{e^x}{2x + 1}$.

16. Find any horizontal, vertical or oblique asymptotes that exist for each of the following functions:

a. $f(x) = \frac{3x^2}{x^2 - 9}$

b. $f(x) = \frac{5x^2}{x + 5}$

c. $f(x) = \frac{5x^2}{3x^2 + x}$

17. Find each of the following indefinite integrals:

a. $\int 5 \, dt =$

b. $\int (4x^2 + \sqrt{x} + 9) \, dx =$

c. $\int \frac{4x - 1}{2x^2 - x} \, dx =$

d. $\int \frac{4x - 1}{(2x^2 - x)^6} \, dx =$

e. $\int \frac{1}{x \cdot \ln x} \, dx =$

f. $\int x \cdot e^{x^2+1} dx =$

g. $\int \frac{x+2}{x+8} dx =$

18. Find R_4 , the approximate area under the function $f(x) = x^3 + 6x^2 - 18x$ on the interval $[-8, 0]$.

19. Find the area of the 2nd rectangle from the right of the previous problem.

20. Find the **exact** value of $\int_1^3 (9x^2 + \pi^2) dx$.

21. The value of our house can be modeled by the function $V(t) = 174 + 5.9 \ln(t + 1)$, with t representing the number of years since it was built in 1990, and $V(t)$ is measured in thousands of dollars.
- What does this model predict the value will be in 2010?

 - What was the average value of the house from 1990 to 2005?
22. Given the demand function is $p = -2x + 10$ and the supply equation is $p = 5x + 3$. Find the producers' surplus at the equilibrium point.
23. Find the maximum and minimum values, if they exist, for $f(x) = 3x^2 - 1x - 2$.
24. Ellie's Electric Toys has fixed costs of \$2935/month and $MC = 30x + 500 - e^{0.2x}$. What is the cost function?

25. Find $f(2, -1)$ if $f(x, y) = 2x - 3x^2y + 4y^2$.

26. Find the first order partial derivatives of $f(x, y) = 6x^2y + 2x - 3y^3$.

27. Find the critical values of $f(x, y) = 20x - 2x^2 + xy - y^2 + 2y$.

28. Is the critical point in the previous problem a relative minimum, relative maximum, or a saddle point?

29. Find f_{yx} when $f(x, y) = x^2y - 8x + 4xy + y^2 + 5y$

30. Find the dimensions of a fish tank with minimum surface area, if the width must be 3 times the length, and the tank must hold 2700 cu in of water when full. Round your dimensions to two decimal places, if necessary.
31. Given the production function for Allied Chemical of $f(L, K) = 25L^{0.2} \cdot K^{0.8}$, where L represent the investment in labor costs, and K represents the investment in capital.
- Find the marginal productivity of labor at the current level of 50 units of labor and 30 units of capital.
 - Find the marginal productivity of capital at the current level of 50 units of labor and 30 units of capital.
 - At the current production levels of 50 units of labor and 30 units of capital, what will cause the greatest increase in the production level, an increase in units of labor or capital?
32. True or False:
- The derivative of a constant is **ALWAYS** zero.
 - The graph of a function **ALWAYS** has exactly one y -intercept.
 - The graph of $y = e^{x+a}$ has a vertical asymptote of $x = -a$.
 - $0.\bar{9} = 1$
 - $2 * 5 - 6 = 0$ is an equation.
