

(b) Sketch the graph of the function $y = 4^{-x} - 3$ using transformations of graphs.

PROPERTIES OF THE EXPONENTIAL FUNCTION: If $a, b > 0$ and x, y are real then

$$1. a^{x+y} = a^x a^y \quad 2. a^{x-y} = \frac{a^x}{a^y} \quad 3. (a^x)^y = a^{xy} \quad 4. (ab)^x = a^x b^x.$$

EXAMPLE 2. Find the limit:

(a) $\lim_{x \rightarrow \infty} \left(\frac{\pi}{7} \right)^x$

(b) $\lim_{x \rightarrow -\infty} (\pi^2 - 7)^x$

(c) $\lim_{x \rightarrow 3^+} \left(\frac{1}{7} \right)^{\frac{x}{x-3}}$

There are in fact a variety of ways to define e . Here are a two of them:

1. $e = \lim_{n \rightarrow \infty} \left(1 + \frac{1}{n}\right)^n$

2. e is the unique positive number for which $\lim_{h \rightarrow 0} \frac{e^h - 1}{h} = 1$.

It can be also shown that $e \approx 2.71828$.

Geometric interpretation:

EXAMPLE 3. Find the limit:

(a) $\lim_{x \rightarrow 1^+} e^{\frac{4}{x-1}}$

(b) $\lim_{x \rightarrow 1^-} e^{\frac{4}{x-1}}$

(c) $\lim_{x \rightarrow \infty} \frac{e^{5x} - e^{-5x}}{e^{5x} + e^{-5x}}$

Derivative of exponential function.

EXAMPLE 4. Find the derivative of $f(x) = e^x$.

CONCLUSIONS:

1. e^x is differentiable function.

2. If $u(x)$ is a differentiable function then by Chain Rule: $\frac{d}{dx}e^{u(x)} = e^u \frac{du}{dx}$.

EXAMPLE 5. Find y'' for e^{x^2} .

EXAMPLE 6. Find the derivative:

(a) $y = \sqrt{e^x + x^3}$

(b) $y = e^{x \sin x}$

EXAMPLE 7. For what value(s) of A does the function $y = e^{Ax}$ satisfy the equation $y'' + 2y' - 8y = 0$?
