## Math 220 - Homework 11

## Due Thursday 11/21 at the beginning of class

Total points: 130 (Writing portion: 70 pts (all the problems marked by *).)
PART A
Problems from the textbook:

- Section 5.5 | problem | 1 | 2 | $4^{*}$ | $5(\mathrm{~b})$ | $6(\mathrm{a})^{*}$ | $6(\mathrm{~b})$ | $10^{*}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| points | 24 | 16 | 10 | 10 | 10 | 10 | 10 |

## PART B

1.     * [10 points] Let $f: \mathbb{R} \rightarrow \mathbb{R}$ be defined by $f(x)=x^{2 n}$, where $n \in \mathbb{N}$. Compute $f([-1,0])$. (Give a formal proof.)
2.     * [10 points] Let $f: \mathbb{R} \rightarrow \mathbb{R}$ be defined by $f(x)=2019-3 x$. Compute $f^{-1}([-3,3])$.(Give a formal proof.)
3.     * [10 points] In class we proved the following proposition:

$$
\text { Let } f: X \rightarrow Y \text {. If } A_{1} \subseteq A_{2} \subseteq X \text { then } f\left(A_{1}\right) \subseteq f\left(A_{2}\right)
$$

State the converse of this proposition and then disprove it.
4. * [10 points] For a function $f: X \rightarrow Y$ and subsets $B_{1}$ and $B_{2}$ of $Y$, prove that

$$
f^{-1}\left(B_{1}-B_{2}\right)=f^{-1}\left(B_{1}\right)-f^{-1}\left(B_{2}\right)
$$
