Work Out: (Points indicated. Part credit possible. Show all work.)

9. (5 points) At the right is the contour plot of a function $f(x,y)$. If you **start** at the dot at $(5,6)$ and move so that your velocity is always in the direction of $\vec{\nabla}f$, the gradient of f , roughly sketch your path on the plot.

NOTE : The numbers on the right are the values of f on each level curve.

10. (15 points) An aquarium in the shape of a rectangular solid has a base made of marble which costs 6 cents per square inch, a back and sides made of mirrored glass which costs 2 cents per square inch and a front made of clear glass which costs 1 cent per square inch. There is no top. If the volume of the aquarium is 9000 cubic inches, what are the dimensions of the cheapest such aquarium?

11. (15 points) Compute $\iint xy dA$ over the "diamond" shaped region bounded by the curves

$$y^2 - x^2 = 4 \quad y^2 - x^2 = 16$$

$$y^2 - 2x^2 = 1 \quad y^2 - 2x^2 = 4$$
