

Topics for Exam 1, MATH308-Fall 2016

1. Direction field, autonomous equations, equilibrium points, analysis of behavior of solutions of autonomous differential equations when $t \rightarrow +\infty$ or $t \rightarrow -\infty$ on the base of the direction fields (equations of type considered in section 1.1 and section 2.5);
2. Separable equations (section 2.2)
3. Linear nonhomogeneous equations of first order: method of integrating factor (section 2.1);
4. Modeling with first order differential equation (falling of a hailstone in the presence of an air resistance (section 1.2), mixing of a substance in a tank or in a pond (section 2.3));
5. To know to determine an interval in which a solution of a linear nonhomogeneous differential equation of first order is certain to exist without solving the equation (section 2.4);
6. Exact equations and integrating factors (section 2.6);
7. Fundamental set of solutions of linear homogeneous equations of second order; the Wronskian (section 3.2);
8. Linear homogeneous equations of second order with constant coefficient in the case of two distinct real roots (sections 3.1).

It is recommended to review all problems in homework assignments 1-4 (excluding bonus questions); the examples given during the class on the topics listed above. Also it is preferable to review the problems and their solutions of the homework assignments 1-5 and problem 1 of homework assignment 6 from Fall 2015 posted on <http://www.math.tamu.edu/zelenko/F15308Hmwk.html>, the homework assignments 1-5 from the Spring 15 term posted on <http://www.math.tamu.edu/zelenko/S15308Hmwk.html>, and homework assignments 1-5, problem 1 of Fall 13 term posted on <http://www.math.tamu.edu/zelenko/F13308Hmwk.html>
