

# Lectures on Linear Algebra and Matrices

G. Donald Allen  
Department of Mathematics  
Texas A&M University  
College Station, TX 77843-3368

September 22, 2003

# Contents

<b>1</b>	<b>Vectors and Vector Spaces</b>	<b>7</b>
1.1	Vector Spaces . . . . .	7
1.1.1	Subspaces . . . . .	10
1.2	Linear independence and linear dependence . . . . .	13
1.3	Bases . . . . .	15
1.4	Extension to a basis . . . . .	16
1.5	Dimension . . . . .	17
1.6	Norms . . . . .	23
1.7	Ordered Bases . . . . .	30
1.8	Exercises. . . . .	32
<b>2</b>	<b>Matrices and Linear Algebra</b>	<b>35</b>
2.1	Basics . . . . .	35
2.2	Linear Systems . . . . .	44
2.3	Rank . . . . .	51
2.4	Orthogonality . . . . .	58
2.4.1	An important equality for matrix multiplication and the inner product . . . . .	63
2.4.2	The Legendre Polynomials . . . . .	64
2.4.3	Orthogonal matrices . . . . .	66
2.5	Determinants . . . . .	67
2.5.1	Minors and Determinants . . . . .	72
2.6	Partitioned Matrices . . . . .	78
2.7	Linear Transformations . . . . .	80
2.8	Change of Basis . . . . .	83
2.9	Appendix A — Solving linear systems . . . . .	85
2.10	Exercises . . . . .	88

<b>3</b>	<b>Eigenvalues and Eigenvectors</b>	<b>95</b>
3.1	Matrix Norms . . . . .	95
3.2	Convergence and perturbation theory . . . . .	99
3.3	Eigenvectors and Eigenvalues . . . . .	103
3.4	The Hamilton-Cayley Theorem . . . . .	117
3.5	Similarity . . . . .	123
3.6	Equivalent norms and convergent matrices . . . . .	131
3.7	Exercises . . . . .	135
3.8	Appendix A . . . . .	138
3.9	Appendix B . . . . .	140
3.9.1	Infinite Series . . . . .	140
<b>4</b>	<b>Unitary Matrices</b>	<b>147</b>
4.1	Basics . . . . .	147
4.2	Schur's theorem . . . . .	153
4.3	Exercises . . . . .	158
<b>5</b>	<b>Hermitian Theory</b>	<b>161</b>
5.1	Diagonalizability of Hermitian Matrices . . . . .	161
5.2	Finding eigenvectors. . . . .	166
5.3	Positive definite matrices . . . . .	170
5.4	Exercises . . . . .	170
<b>6</b>	<b>Normal Matrices</b>	<b>171</b>
<b>7</b>	<b>Factorization Theorems</b>	<b>175</b>
7.1	The PLU Decomposition . . . . .	175
7.2	<b>LR</b> factorization . . . . .	183
7.3	The <i>QR</i> algorithm . . . . .	185
7.4	Least Squares . . . . .	191
<b>8</b>	<b>Jordan Normal Form</b>	<b>195</b>
8.1	Minimal Polynomials . . . . .	195
8.2	Invariant subspaces . . . . .	198
8.3	The Jordan Normal Form . . . . .	204
8.4	Convergent matrices . . . . .	208
8.5	Exercises . . . . .	209

<b>9 Hermitian and Symmetric Matrices</b>	<b>211</b>
9.1 Variational Characterizations of Eigenvalues . . . . .	215
9.2 Matrix inequalities . . . . .	217
9.3 Exercises . . . . .	218
<b>10 Nonnegative Matrices</b>	<b>219</b>
10.1 Definitions . . . . .	219
10.2 General Theory . . . . .	220
10.3 Mean Ergodic Theorem . . . . .	224
10.4 Irreducible Matrices . . . . .	227
10.4.1 Sharper estimates of the maximal eigenvalue . . . . .	233
10.5 Stochastic Matrices . . . . .	236
