Name: $\qquad$
Math 131 Section: $\qquad$ Row: $\qquad$

This assignment is due by 5:00 pm on January 25, 2007 You can turn it in to me in class or drop it by the office, Blocker 640D. Be sure that you follow the homework rules, they can be found on your syllabus. Please work the problems in the order that they are listed.

Use the graph of $f(x)$ to answer questions 1 and 2. If necessary give the best approximation.

1. (a) $f(4)$
(b) $f(8)$
2. (a) Find the values of x where $f(x)=2$
(b) Find the average rate of change from $x=3$ to $x=7$

3. (a) Find the equation of the line through the points $(144,299)$ and $(236,644)$.
(b) Find the slop and the horizontal intercept for $7 x+3 y-210=0$
4. The table gives the average weight, $w$, in pounds of guys in their sixties for various heights, $h$, in inches.

| $h$ (inches) | 68 | 69 | 71 | 72 | 75 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| $w$ (pounds) | 163 | 174 | 181 | 189 | 203 |

(a) Find the best fitting formula with weight as a linear function of height.
(b) Predict the average weight of a guy 6 feet tall.
5. The values of $f(x), g(x)$, and $h(x)$ are given in this table. Classify the each graph as concave up, concave down, or linear.

| x | $\mathrm{f}(\mathrm{x})$ | $\mathrm{g}(\mathrm{x})$ | $\mathrm{h}(\mathrm{x})$ |
| :---: | :---: | :---: | :---: |
| 1 | 7 | 7 | 7 |
| 3 | 8 | 11 | 17 |
| 7 | 12 | 19 | 29 |
| 10 | 17 | 25 | 36 |
| 17 | 35 | 39 | 42 |

6. The graph shows the balance, $B$ in dollars, of a bank account over time, $t$, in years.
(a) Give the vertical intercept and interpreta this value.
(b) Find the average rate of change over the first 4 years of the account. Give units with your answer.
(c) Give the interpretation of the answer in part b.
