14		The values in	The values in the total row (cell B8 and C8) are used to check to see if I am using all of the data.										
15													
16													
17													
18		This spreadsheet simulates rolling a 4 sided die 30 times. The die rolls are found in the region titled Grid for the data. Notice that the numbers in the blue regions are just counting the rows and columns. This easily allows me to figure out											
19													
20		how many die rolls that I have done.
