

## Math 151H Fun Project (Extra Credit)

This project is **optional**.

### **Options for the Fun Project:**

1. Create, write and illustrate a childrens book/comic explaining calculus to someone in middle school.
2. Create/Design a game for learning some Calculus concepts. You have to work **individually** for this project.

You also may be asked to present/read your story or demonstrate your game to actual middle school students.

Note: You have to work on this project individually. However, if two students decide to create game and write a story over the same topic, they can work together and present both book and game as a group work. Deadline for this project is November 30.
